Article in Interest of Bureau of Agriculture.

An Exposition of the Opportunities Here for Small Farmer - Many Little Products.

(By Allen Herbert, in the interest of the Hawaiian Board of Agriculture and Forestry.)

It is of importance to these Islands that the truth should be told regarding the actual conditions here, and the opportunities for a desirable white immigration of small farmers for the production of diversified agriculture. Diversified agriculture and horticulture is certainly a following that we all feel a deep interest in, and upon it the future of these Islands depends; but this interest needs organization and co-operation as well as our sugar interest.

We have on several occasions, since our connection with this Bureau, called to the attention of our people, that there are in this country many other avenues for the safe investment of capital besides sugar, if proper encouragement be given. What we need is that our wealthy citizens should take the initiative in the organization of those industries that will tend to extend our agricultural possibilities, to widen inquiry into the resources of our Islands and bring these to the notice of home seekers.

Fig Culture—The fig tree will bear two crops a year. Insects and blight do not trouble it. For the fiscal year ending June 30th, 1898, there was imported into the United States 11,900,700 pounds of figs. These figs were sold at auction in New York. The prices realized are between 9 and 28 cents per pound. This amount could be produced in Hawaii under proper conditions.

Silk Industry—The wonderful production of the silk industry in the United States and the value of the production of silk fabrics reached \$110,000,000 in 1898. The silk textile industry of the United States greatly exceeds that of France. The natural food of the silk worm is the white mulberry, but it will feed on the leaves of other plants we have, as well as on the lettuce. This is the land for the silk worm.

Tobacco—Hawaii has without doubt thousands of acres of land adapted to the cultivation of tobacco. Our warm climate is also peculiarly well adapted to the curing of the Havana seed leaf. All we need is proper instruction in the cultivation of the plant to maturity.

All textile plants, such as Agava, Tita, Pinuelo, cotton, etc., grow well, and the manufacturing of sacking might be made a great industry in Hawaii.

Among the most important of the fibers, is the heneguen or sisal hemp. It is known as heneguen in Mexico. The export from there is 90,000,000 pounds annually, average value \$8,500,000. The United States takes four-fifths of that amount.

One of four most profitable but much neglected industries is dairying and its new methods.

These are only a few products. Others will suggest themselves, even fruits and vegetables might well be introduced into our Islands with profit. Our Government should encourage the small farmers to experiment with new things and something should be done at once.

RAW SUGAR IS GIVEN A BLAST.

(Washington Star.)

"Sometimes the cargoes brought from the hot countries play havoc by the fumes they give forth," said an old sea captain. "On one voyage the sugar we had aboard made every one sick. Matters finally became so bad that we could not live below deck. I chased a big Newfoundland dog out of its kennel and used the place as a berth, while the crew threw themselves around the deck at the imminent risk of being washed overboard. The cook had to go into the hold occasionally for provisions, and when he did so he tied a piece of cloth over his mouth and nose. After several such hurried visits he was overcome and two other men, similarly protected, went down and secured him with ropes and he was hauled out. The hatchles could not be battened down, for fear the cargo would spoil so we had to put up the best we could with the fumes until we reached port. The usually pleasant aroma of coffee becomes sickening, indeed, when a man has to sail for weeks in a ship loaded with the grain. Pine lumber is worse, and petroleum as bad as pine lumber. You taste the stuff in everything you eat, and meat and bread are the same, so far as your palate is able to distinguish, all savoring strongly of whatever your cargo happens to be.

"Under the influence of the tropical sun these fumes get to be simply terrible. Once we left port with our drinking water in pine casks. We had been out only a few days when the water began to taste resinous, and from day to day the taste became more disagreeable. At last we were forced to stop drinking altogether, and make for the nearest port, which happened to be in the Island of St. Helena. There we changed the wooden receptacles for others of a material not so easily affected by heat. But in the meantime we had suffered cruelly for our ignorance."

TEN CENTS A DAY.

Evidence was adduced in a suit over a board bill at Chester, Pa., that showed how it is possible for some people among the foreign element to work for the low wages that many have accepted in competition with American workmen. A Polander testified that the usual amount his countrymen paid in that city for lodging, washing and cooking was 10 cents a day.

I consider it not only a pleasure but a duty I owe to my neighbors to tell about the wonderful cure effected in my case by the timely use of Chamberlain's Colic, Cholera and Diarrhoea Remedy. I was taken very badly with flux and procured a bottle of this remedy. A few doses of it effected a permanent cure. I take pleasure in recommending it to others suffering from that dreadful disease.—J. W. Lynch, Dorr, W. Va. This remedy is sold by all druggists. Benson, Smith & Co., Ltd., agents for H. I.

There Are Plumbers and Plumbers.

OUR SPECIALTY IS

Sanitary Plumbing.

There's as much difference between plumbing and SANITARY PLUMBING as there is between daylight and darkness. Anyone can put a lot of pipes together and run them off anywhere, but with Honolulu's surface sewerage the essential point is to have the plumbing done in a way that makes the Sanitary conditions perfect.

A Model Plant is not complete without Electric Power, thus dispensing with small engines.

Why not generate your power from one CENTRAL Station? One generator can furnish power to your Pump, Centrifugals, Elevators, Plows, Railways and Hoists; also, furnish light and power for a radius of from 15 to 80 miles.

Electric Power being used, saves the labor of hauling coal in your field, also water, and does away with high-priced engines, and only have one engine to look after in your mill.

Where water power is available it costs nothing to generate Electric Power.

THE HAWAIIAN ELECTRIC COMPANY is now ready to furnish Electric Plants and Generators of all descriptions at short notice, and also has on hand a large stock of Wire, Chandeliers and Electrical Goods.

All orders will be given prompt attention, and estimates furnished for Lighting and Power Plants; also, attention is given to House and Marine Wiring.
